

IMPORTANT NOTES: Read First

- (A) Use liquid thread lock (such as Loctite®) with all threaded hardware. **Important:** Liquid thread lock (prior to curing) helps to eliminate the common problem of "thread seizure" in stainless steel hardware by serving as a lubricant during assembly.
- (B) Do not pour concrete until the equipment is completely assembled, leveled and plumbed. Concrete must be allowed to cure completely before using the equipment (at least 72 hours).
- (C) All bolt threads protruding beyond the nut must be cut and de-burred until end is smooth to the touch. Sharp edges and/or points of any kind must be eliminated. No more than two threads may be exposed beyond the end of the nut.
- (D) Height of seat while unloaded and at rest, must be between 14" [360mm] and 28" [710mm] above the finish grade.
- (E) An appropriate energy absorbing safety surface is required under and around all playground equipment. Loose fill protective surfacing is shown only as an example for the purpose of this assembly instruction. Other surfacing material may vary in thickness and/or compression depths. See free publication - The Handbook for Public Playground Safety, Publication #325 at www.cpsc.gov for the surfacing appropriate for the fall height of the equipment or consult your surfacing supply representative.

Step 1

Refer to Footing Layout and mark footing hole location.
Dig (1) Ø18" footing hole. Refer to Footing Detail for
depth and details.

IMPORTANT: For areas with soft soil conditions,
larger footings may be required.

* Footing depth must be adjusted to compensate for
the depth/thickness requirements of selected safety
surfacing. See Section 06.1 of the Installation Manual

72" [1829mm] Use Zone Recommended

Refer to current ASTM 1487 standards:
The use zone for Rocking or Spring equipment upon which the user is intended to sit shall be no less than 72" [1829mm] in all directions from the at rest perimeter of the play structure.

Step 2

Use the Single Spring Bottom Mount Plate as a template to create a plywood template for the placement of the anchor bolts. Attach anchor bolts to template as shown in Figure 2.

NOTE: Plywood not supplied.

Step 3

Pour concrete footing and level template on surface. Orient and set anchor bolts in concrete as shown in footing detail. Allow approximately 1" [25mm] of thread to protrude from the concrete as shown in Figure 3. Allow 72 hours to cure before proceeding to next step. (See Note B)

Step 4 (Factory Assembled)

Insert Event Spring Retainers into Spring and attach to Top Mount Plate and Spring Mount Plate as shown in Figure 4. (See Note A)

NOTE: Ensure Anti-Rotation Spacer is oriented with arrows pointing to the inside and end of the spring.

Step 5 (Factory Assembled)

Attach Spring Rider Panels together as shown in Figure 5. (See Note A)

Step 6

Attach Spring Rider Panels and Mounting Spacers to Top Mount Plate as shown in Figure 6. (See Note A)

FIGURE 7

Step 8

Attach Saddle to Spring Rider Panels as shown in Figure 1.1. (See Note A)

Step 9

Attach Spring Mount Plate to Anchor Bolts as shown in Figure 1.1. (See Notes A & C)

Step 10

Fully tighten all fasteners according to the "TIGHTENING TORQUE FOR HARDWARE" section of the Installation Manual.

Step 11

Place required protective surfacing under and around Single Spring Rider. (See Note E)
