

IMPORTANT NOTES: Read First

- (A) Use liquid thread lock (such as Loctite®) with all threaded hardware. **Important:** Liquid thread lock (prior to curing) helps to eliminate the common problem of "thread seizure" in stainless steel hardware by serving as a lubricant during assembly.
- (B) Do not pour concrete until the equipment is completely assembled, leveled and plumbed. Concrete must be allowed to cure completely before using the equipment (at least 72 hours).
- (C) Refer to Installation Manual for R5-1301 Steel Wall and 1708 Tube Slide Support assembly instructions.
- (D) Use appropriate compliant protective surfacing and adjust footing depths accordingly. See free publication - The Handbook for Public Playground Safety, Publication #325 at www.CPSC.gov for the surfacing appropriate for the fall height of the equipment or consult your surfacing supply representative.
- (E) Exit height must be between 7" [180mm] and 15" [380mm] from finish grade. Exit region must also have a downward slope of 0 to 4°.

Step 1

Refer to Footing Layout and mark footing hole locations. Dig (5) $\varnothing 18"$ x 30" deep footing holes and (1) 12"x24"x18" deep oblong footing hole. Refer to Footing Detail for depth and details.

IMPORTANT: For areas with soft soil conditions, larger footings may be required.

Step 2 (Factory Assembled)

Attach Tube Slide Leg to Tube Slide Exit as shown in Figure 2. (See Note A)

FIGURE 2

Step 3

Attach Tube Straight 24 and Tube Slide Steel Wall Protector to the Tube Slide Steel Wall as shown in Figure 3. (See Note A).

FIGURE 3

Step 4

Attach Tube Entry Panel to posts and deck.
(Refer to Notes A and C)

Step 5

Refer to Figure 1 on Page 1 and Side Elevation for tube orientation. Attach remaining tube sections as shown in Figure 4. For tube connections with Tube Support refer to Figure 5. (See Notes A and C)

Step 6

Fully tighten all fasteners according to the "TIGHTENING TORQUE FOR HARDWARE" section of the Installation Manual.

Step 7

Plumb and level entire component. Place Tube Supports and Legs in footing holes and pour concrete into footing holes. Allow at least 72 hours to cure before using this equipment. (See Note B)

Step 8

Place appropriate compliant protective surfacing under and around Spiral Tube Slide. (See Note D)
